EXPERIMENT 9

GROUP BY, HAVING and ORDER BY

Aim: To group records, filter groups and sort query results.

Software Required: MySQL 8.0 Command Line Client

SQL Program

```
USE SQL_Lab;

CREATE TABLE Sales (
    sale_id INT PRIMARY KEY,
    employee_name VARCHAR(50),
    department VARCHAR(20),
    amount INT
);

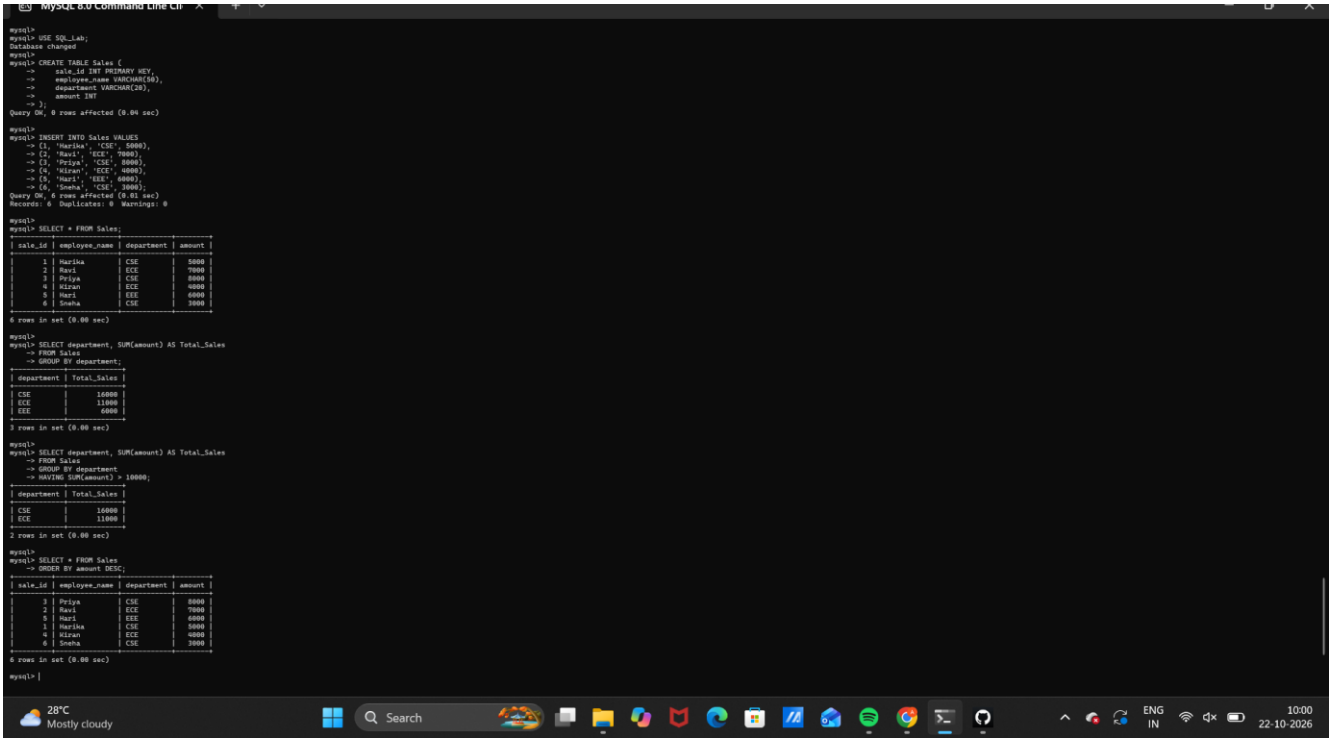

INSERT INTO Sales VALUES
(1, 'Harika', 'CSE', 5000),
(2, 'Ravi', 'ECE', 7000),
(3, 'Priya', 'CSE', 8000),
(4, 'Kiran', 'ECE', 4000),
(5, 'Hari', 'EEE', 6000),
(6, 'Sneha', 'CSE', 3000);

SELECT * FROM Sales;

SELECT department, SUM(amount) AS Total_Sales
FROM Sales
GROUP BY department;

SELECT department, SUM(amount) AS Total_Sales
FROM Sales
GROUP BY department
HAVING SUM(amount) > 10000;

SELECT * FROM Sales
ORDER BY amount DESC;
```

Observation

Execute the SQL statements in MySQL 8.0 Command Line Client. Verify that each statement runs successfully and that the displayed rows match the inserted sample data and query conditions.

Note: GROUP BY groups rows with the same department. HAVING filters groups after aggregation. ORDER BY sorts the result.

Result

Thus, Experiment 9 (GROUP BY, HAVING and ORDER BY) was performed using MySQL 8.0.
