EXPERIMENT 13

AUTO_INCREMENT and Sequence-like Number Generation

Aim: To generate numeric identifiers automatically using AUTO_INCREMENT in MySQL 8.0.

Software Required: MySQL 8.0 Command Line Client

SQL Program

```
USE SQL_Lab;

CREATE TABLE Products (
    product_id INT AUTO_INCREMENT PRIMARY KEY,
    product_name VARCHAR(50),
    price INT
);

INSERT INTO Products (product_name, price)
VALUES ('Laptop', 50000);

INSERT INTO Products (product_name, price)
VALUES ('Mouse', 500);

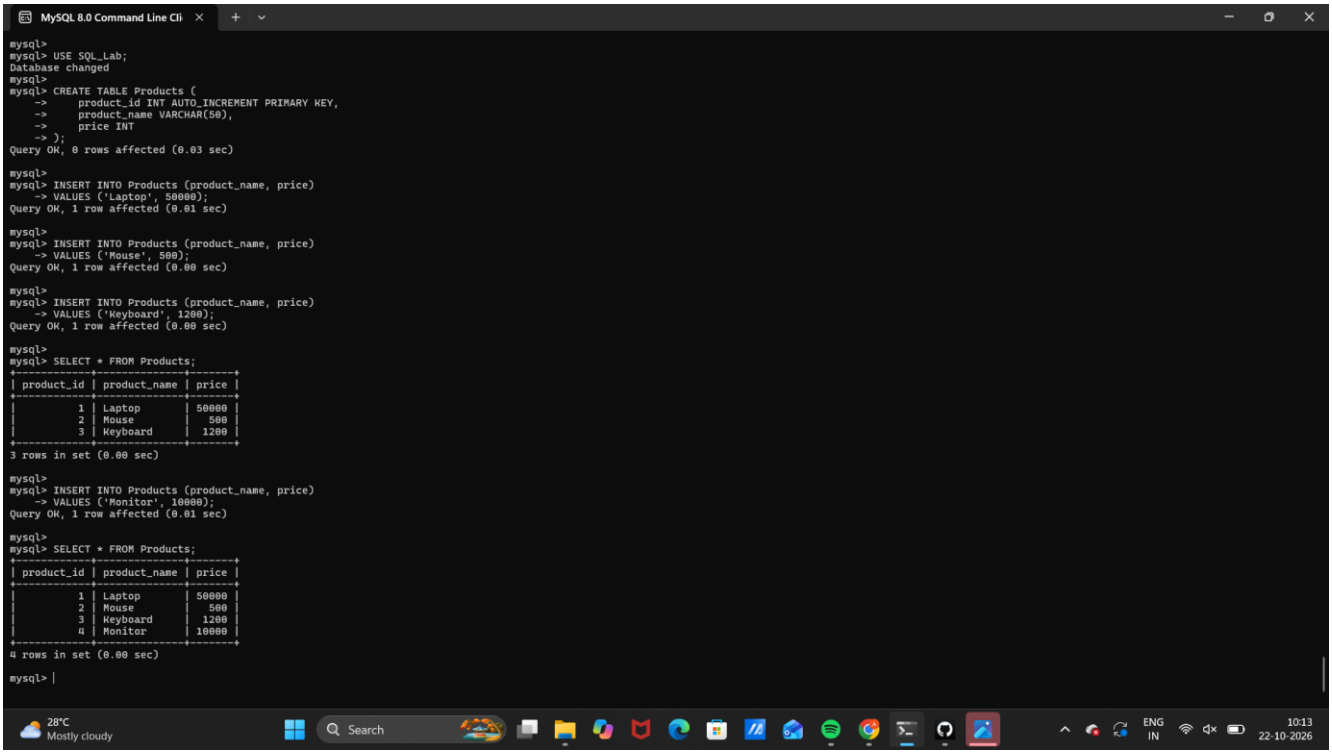

INSERT INTO Products (product_name, price)
VALUES ('Keyboard', 1200);

SELECT * FROM Products;

INSERT INTO Products (product_name, price)
VALUES ('Monitor', 10000);

SELECT * FROM Products;
```

Expected Output

Observation

Execute the SQL statements in MySQL 8.0 Command Line Client. Verify that each statement runs successfully and that the displayed rows match the inserted sample data and query conditions.

Note: MySQL 8.0 does not support Oracle-style CREATE SEQUENCE syntax. AUTO_INCREMENT is the standard MySQL approach for automatically generated integer IDs.

Result

Thus, Experiment 13 (AUTO_INCREMENT and Sequence-like Number Generation) was performed using MySQL 8.0.
